

Project Alpha Overview

Page 1: Introduction

Project Alpha is an internal customer management platform built by the Engineering team to centralize customer data across sales, support, and billing systems.

Project Alpha Overview

Page 2: Goals

The primary goals of Project Alpha are to reduce duplicate customer records, provide a single dashboard for account managers, and integrate with the company's billing and support ticketing systems.

Project Alpha requires integration with the existing CRM database, a role-based access control system, and an audit log for all customer data changes. It must support at least 10,000 concurrent customer records.

Project Alpha Overview

Page 4: Current Status

Project Alpha is currently in active development. The customer data model and authentication modules are complete. The billing integration module is in progress and is expected to be complete next quarter.

Project Alpha Overview

Page 5: Team

Project Alpha is owned by the Platform Engineering team, with support from the Data team for the customer deduplication logic and the Security team for access control review.
